The most well-known scales measuring the lightfastness is the Blue Wool Scale, defined by ASTM (American Standard Test Measure). On the Blue wool Scale the lightfastness is rated between 1–8. 1 being very poor and 8 being excellent lightfastness On ASTM scale the lightfastness is rated between I-V. I is excellent lightfastness and it corresponds to ratings 7–8 on Blue Wool Scale. V is very poor lightfastness and it corresponds to Blue Wool scale rating 1-2
